PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building backend services, RESTful APIs, data models, authentication, and real-time web systems. Proficient in C#, .NET, JavaScript, TypeScript, SQL, and automated testing, with experience documenting and debugging production applications. Delivered an enterprise trainer-management platform supporting operations across 12 regional offices.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, C#, SQL
- **Frameworks & Tools:** ASPNET Core, Node.js, Next.js, React, Angular, Django, PostgreSQL, SQL Server, Docker
- **Engineering:** RESTful APIs, JWT Auth, SignalR, Entity Framework Core, AutoMapper, Unit Testing (xUnit, PyTest, Jest, FsCheck), Swagger / OpenAPI

PROFESSIONAL EXPERIENCE

DAF Tech Computer Engineering

Nov 2025 - Present

Software Engineer

Addis Ababa, Ethiopia

- Designed and delivered an enterprise trainer-management platform that coordinated expert deployment across 12 regional offices in Ethiopia, aligning backend workflows with operational needs.
- Built scalable RESTful APIs with ASPNET Core 9, SQL Server, and Entity Framework Core; enforced security through JWT authentication and role-based access control for 12 Regional Admins and a Super Admin.
- Integrated SignalR for real-time deployment notifications and QuestPDF for automated digital certificate generation.
- Achieved high reliability through property-based and unit testing with xUnit and FsCheck, while providing complete API documentation through Swagger / OpenAPI.
- Contributing backend APIs for customer account management, billing cycles, and payment tracking using ASPNET Core and SQL Server.
- Designed normalized database schemas and RESTful endpoints for customer account management, billing cycles, and payment tracking, while collaborating with a cross-functional team on system performance and modular architecture.

PEDS - Public Enterprise Development Service

Jun 2024 - Jan 2025

IT & Software Engineer Intern

Addis Ababa

- Provided technical support for enterprise computer systems, networks, and software applications serving internal staff.
- Installed, configured, and troubleshoot hardware and software issues; assisted in maintaining stability of internal platforms.

TECHNICAL PROJECTS

E-Combinator <https://github.com/tsedeysolomons/E-COMBINATOR>

- Built a startup incubation platform for iCog Labs that enabled founders to submit ideas, track applications, and connect with investors.
- Designed RESTful APIs and database schemas for startup submissions, user roles, and application workflows.

EMBE-T <https://github.com/tsedeysolomons/EMBE-T>

- Developed a web platform for managing training programs and generating E-Tickets for participants.
- Built backend services and database models to manage training records, user accounts, and ticket issuance.

Pharmacy Finder System https://github.com/tsedeysolomons/Pharmacy_Finder_System

- Web application helping users locate nearby pharmacies and retrieve pharmacy details.
- Designed REST APIs and database structures for pharmacy data storage and efficient location-based search.

EDUCATION

Debre Tabor University

2025

B.S., Computer Science

- **GPA:** 3.48 / 4.0
- **Coursework:** Data Structures & Algorithms, Operating Systems, Distributed Systems, Database Management, Embedded Systems, Microcontrollers
